

COMMITMENT

A MORE SUSTAINABLE ECONOMY

“

As part of a green loan agreement with BNP Paribas Fortis, Interparking has set itself additional ambitious targets for reducing its environmental footprint. The company is aiming to reduce its electricity consumption by 20% per parking space and its carbon footprint by 30%. A number of levers can be used: LED lighting, automation, 100% green energy contracts, greener mobility for employees, etc.

PROJECT DIRECTOR - CO2LOGIC

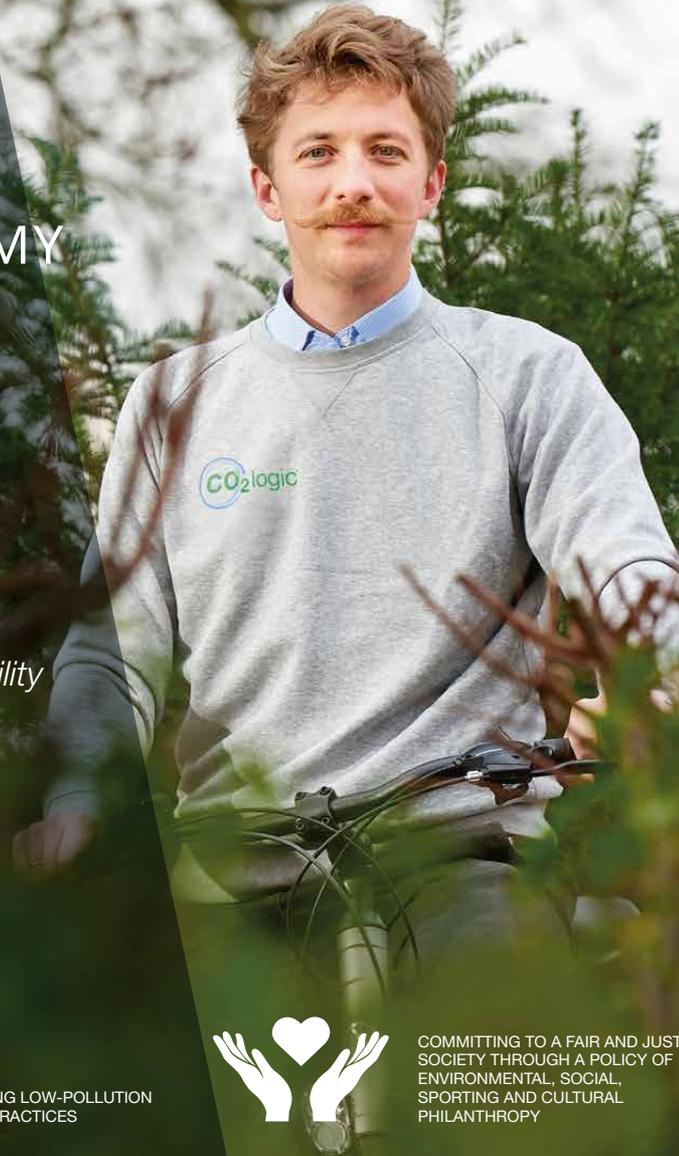

ESTABLISHING A PROACTIVE AND PRACTICAL POLICY FOR REDUCING OUR ENVIRONMENTAL FOOTPRINT

REWARDING LOW-POLLUTION DRIVING PRACTICES

COMMITTING TO A FAIR AND JUST SOCIETY THROUGH A POLICY OF ENVIRONMENTAL, SOCIAL, SPORTING AND CULTURAL PHILANTHROPY

Interparking has always paid particular attention to its impact on society. In 2018, the Group took another step forward in contributing to a more sustainable and environmentally-friendly economy.

FIRST GREEN LOAN IN BELGIUM

In October 2018, Interparking became the first company in Belgium to take out a green loan for which the cost depends on environmental criteria. This €80 million credit facility was granted by the bank BNP Paribas Fortis. The terms of the loan are determined by Interparking's sustainability performance between now and 2020.

How does the green credit work? The rate that Interparking will pay to BNP Paribas Fortis will be calculated based on specific environmental indicators: on the one hand, the reduction in the company's carbon footprint per full-time equivalent and, on the other hand, the reduction in the energy consumption of the car parks. If the carbon footprint per full-time equivalent and energy consumption fall by 30% and

20% respectively between now and 2020, Interparking will benefit from a discount of close to 10%.

CO₂-NEUTRAL CERTIFICATION

To reduce its energy consumption, Interparking is generalizing the introduction of LED systems, implementing low-energy ventilation systems and replacing its vehicle fleet with low-pollution vehicles. The company also uses green energy and automation, which avoids having the lights on in car parks 24 hours a day. Since the beginning of 2016, Interparking supports Wanrou (www.wanrou.org), a carbon offsetting project in Benin. This way, the residual CO₂ emissions generated by Interparking's activities are offset by the carbon gains made on the African continent.

This approach is acknowledged by the “CO₂-neutral” certification. Since 2015, all the Group’s activities are certified neutral thanks to the offsetting projects carried out in partnership with the independent consultancy firm CO2Logic.

GREEN MOBILITY

In recent years, electric mobility has continued to grow on our roads. Interparking intends to support the transition toward low-polluting vehicles by making available charging stations for rechargeable electric and hybrid vehicles in its car parks.

In the Netherlands, Interparking has formed partnerships with several green mobility actors such as New Motion, EV-Box and Ecotap. In Rotterdam, thanks to license plate recognition technology, drivers of clean vehicles also benefit from a €0.20 per hour discount off the basic parking rate.

In Belgium, Interparking is using the potential of Big Data to encourage electric mobility: by using recharging data for public terminals, the company was able to identify those areas where demand for charging stations is highest. By the end of 2018, 200 charging stations had been installed in the car parks, on islands that are easily identifiable due to their own color coding. By using their Pcard+ to charge their vehicle battery, Interparking customers benefit from one of the lowest rates on the market.

A LUNG IN THE CITY

At the same time, Interparking tested, measured and implemented ENS technology, an

innovative positive ionization technique to eliminate fine and ultrafine particles in the Beffroi parking in Namur. After the installation, the quality of the air has become better in the car park than in the surrounding city.

SOCIAL DIALOG

Social dialog is also part of corporate responsibility. Interparking is offering more opportunities, often at the initiative of the employees themselves, to stimulate exchanges between the teams. On May 31, 2018, a European works council was created to inform its members, and the staff of the different countries, of the group’s activities in the event of transnational operations. These exchanges help to ensure a healthy and friendly working environment.

CORPORATE PHILANTHROPY

A successful company must also commit to a fairer and more just society. At Interparking, this commitment is reflected in a number of corporate philanthropy and sponsorship initiatives in social, environmental, cultural and sporting areas.

In terms of social aspects, we set up the Parking School, which teaches and trains our teams and enables them to obtain training certificates, from blue collar to car park manager level. We are also partners of the 50's @ WORK program, which aims to help people over 45 get back into the labor market.

We support organizations such as Samusocial, the objective of which is to promote the social reintegration of the homeless - the very people we see in our car parks every day.

In Germany, Contipark has partnered with Sports Against Violence since 2012. This NGO organizes a six-day race every year to raise awareness among young Berliners

about the issue of urban violence. Contipark was also involved in organizing a ball, the profits from which are helping to get children out of poverty.

In Austria, Contipark supports Salzburg tennis club, which supports many social projects. The company also funds research programs into multiple sclerosis.

In France, we support the Saint-Joseph Foundation. Interparking also offered free parking to volunteers and donors who

assisted in February in the organisation of a large-scale blood drive in Salon de Provence.

In addition, we support various cultural institutions in Belgium such as "La Monnaie" opera house in Brussels, the "Concertgebouw" in Bruges, the "Festival van Vlaanderen", the "Klarafestival" and many other cultural initiatives.
